For Instructions for Use on HEPA/ULPA filter installation, please refer to the addendum titled, “ABSOLUTE FILTERS – End User Information.”

IMPORTANT SAFETY INSTRUCTIONS

PLEASE READ THESE INSTRUCTIONS COMPLETELY BEFORE USING THE MACHINE. DEPENDING ON LOCAL REGULATIONS AND THE COMPOSITION OF THE MATERIALS YOU HAVE COLLECTED, THERE MAY BE REQUIREMENTS FOR SPECIAL HANDLING AND DISPOSAL OF THE COLLECTED DEBRIS. CONSULT YOUR LOCAL OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) AND ENVIRONMENTAL PROTECTION AGENCY (EPA) OFFICIALS FOR DETAILS.

CAUTION: This Nilfisk vacuum cleaner or any other vacuum cleaner is not to be used in explosion-hazardous areas, as serious injury could result.

Under no circumstances may this cleaner safely be used for the collection of hazardous or toxic materials unless equipped with a special HEPA (High Efficiency Particulate Air) filter and bag which have been installed according to written instructions from Nilfisk-Advance.

ATTENTION EMPLOYER: Please ensure these Instructions for Use are made available and understood by your employees or any other persons who may use this equipment.

To list all toxic and hazardous materials would be beyond the scope of these Instructions. It is the Employer's responsibility to identify, for Employees' and others' information, hazardous or toxic materials which may be collected by this equipment.

Your new Nilfisk industrial vacuum cleaner is a precision-engineered instrument designed for exceptionally fine filtration. Ordinary vacuum cleaners do not have HEPA filters, and cannot be safely used for hazardous dust collection. This Nilfisk machine is safe to use with fine powders or hazardous materials, as long as certain precautions are taken. Proper care of this cleaner is essential to the maintenance of its ultrafine filtering capabilities.

BEFORE USE: DO NOT ATTEMPT TO OPERATE THIS CLEANER UNTIL YOU HAVE INSTALLED ITS VARIOUS COMPONENTS ACCORDING TO THE FOLLOWING INSTRUCTIONS:

WARRANTY

The Nilfisk companies warrant that Nilfisk equipment will be free of defects in workmanship or material for a period of two years from the date of delivery. Should any failure to conform to this warranty appear, the Nilfisk companies shall upon notification within such time period, correct such non-conformity, at its option, either by repairing any defective part or parts, or by replacing a part or parts provided that the equipment is returned to an authorized Nilfisk service facility. In all cases freight both ways will be at the expense of the customer. Equipment shall not be returned without advance notice to, and consent of the Nilfisk companies.

EXCEPT AS SPECIFICALLY SET FORTH HEREIN, THE NILFISK COMPANIES MAKE NO WARRANTIES, EITHER EXPRESSED OR IMPLIED AS TO ANY MATTER WHATSOEVER, INCLUDING WITHOUT LIMITATION ANY AND ALL WARRANTIES OF MERCHANTABILITY, FITNESS FOR PURPOSE, OR OTHER WARRANTIES, ALL OF WHICH ARE EXPRESSLY DISCLAIMED AND EXCLUDED. NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO LOSS OF PRODUCTION, LOSS OF TIME, LOSS OF PROFITS OR OTHER SIMILAR INDIRECT LOSSES WHICH MIGHT OCCUR AS A RESULT OF DEFECTS, PARTIAL OR TOTAL FAILURE OF THE PRODUCT TO PERFORM AS SPECIFIED.

Correction of non-conformities or defects in the manner and for the period of time provided above, shall constitute fulfillment of all liabilities of the Nilfisk companies to the customer, whether based on contract, negligence or otherwise with respect to, or arising out of such equipment. The remedies set forth herein are exclusive, and the liability of the Nilfisk companies with respect to this sale or anything done in connection therewith, whether in contract, in tort, under any warranty, or otherwise, shall not except as expressly provided herein, exceed the price of the equipment or part on which such liability is based.

The warranty does not cover repairs due to normal wear and tear, accident, neglect, misuse or abuse, incorrect installation or use other than as described in the instruction booklet. Breaks in hoses and cables are not covered. This warranty is rendered void if the motor number plate is removed or defaced or if repairs are made or attempted by persons not authorized by the Nilfisk companies.

Photo 1

MACHINE SET-UP:

Before turning on the motor: Install the microfilter (#117304-10-Felt, #017230-AES Polycomposite, #017220-01-Gore-Tex®), the small felt sock, on the bottom of the motor by sliding the filter over the motor bottom, and covering as much of the bottom as the depth of the filter will permit (photo 1). Be sure the filter's elastic collar holds the filter snugly in place and is as high up on the motor bottom as possible.

Photo 2

2. Next, mount the HEPA/ULPA filter (#01710104XX / 01710204XX) according to the accompanying bulletin. Place the motor back in the cavity in the top of the cleaner (photo 2). Fasten the motor head in place using either the positive twist safety latches or the standard latches, depending on which option you purchased.

Photo 3

Photo 4

3. Installing the Polyliner and Paper Bag: Twist and release the two positive twist safety latches, or the standard latches, depending on your machine. They are located on the body of the container, front and back. Lift off the top. Open the polyliner and place in the bottom of the container with its walls flush against the container sides and lipped under the container inlet (photo 3). The excess length of polyliner is draped over the top of the container and down the outside then rolled at the end to permit the container clips to close.

Install a paper bag inside the polyliner according to the illustrations printed on the paper bag itself (photo 4). Replace the top container and fasten the two clips.

Note: Polyliners are optional. If you choose not to use a polyliner, follow the instructions to install the paper bag.

4. The GM 810 and GM 811 offer a wide variety of hoses and accessories. Consult your local District Sales Managers or Customer Service Department at (800)-NILFISK for a list of optional hoses and accessories. No matter what hose option you have chosen, it can be connected in the following manner. Affix the vacuum hose to the vacuum by inserting it into the orifice on the lower container. Once it is inserted, rotate the inlet coupler a quarter turn to lock it into place. Consult your District Manager or the Customer Service Department if you have any problems attaching the accessories you have purchased.

Photo 5

USING THE MACHINE:

Starting and stopping: Press the gray button on the upper front portion of the vacuum (photo 5).

Correct use of the machine: This machine is not a wet/dry vacuum. It is intended for dry collection only. Do not use this vacuum to pick up liquids, or any wet materials.

EMPTYING:

IF THIS VACUUM CLEANER IS USED TO COLLECT HAZARDOUS MATERIAL, DO NOT ATTEMPT TO OPEN OR EMPTY ITS CONTENTS WITHOUT PERSONAL PROTECTIVE CLOTHING AND RESPIRATORY PROTECTION.

Photo 6

To empty the container and its contents, first turn off the motor. Allow the cleaner to sit undisturbed for at least thirty (30) seconds. Then twist and release the container clips. Once the seal is broken, turn on the motor again. This will prevent ultrafine particles which are still suspended in the air inside the container from escaping into the work place. Lift off the container top. Remove the polyliner and paper bag within it (photo 6). Then seal off the polyliner with the paper bag inside and install a new polyliner and paper bag according to step 2, Machine Setup.

DISPOSAL:

Depending on local regulations, and the composition of the material you have collected, there can be a requirement for special handling and labeling of the filled and sealed plastic bags. Consult you local Occupational Safety and Health Administration (OSHA) and Environmental Protection Agency (EPA) official for details.

MAINTENANCE

Routine Maintenance:

To ensure maximum performance of your Nilfisk vacuum cleaner, be sure to check your main filter regularly. Your filter may need to be shaken to remove caked dust from time to time.

Filter Replacement:

To ensure that your Nilfisk vacuum cleaner delivers the years of trouble-free operation for which it was designed, it is necessary to check and replace filters regularly.

Photo 7

1. Main Filter: The large napped cotton bag which is semi-permanently mounted inside the container will not require frequent replacement. The main filter must be replaced when the cleaner no longer develops powerful suction, yet bags are not full and other filter components are not clogged. Extend main filter service life by frequent changes of disposable polyliners and paper bags (photo 7).

2. Microfilter: This small felt polyester sock, which fits over the motor bottom will require periodic inspection. Dust will discolor the microfilter. Change the microfilter as soon as any discoloration is easily noticeable. Do not shake this microfilter since this can cause liberation of potentially harmful microscopic dust into the air. Carefully remove and discard with collected debris in the sealable poly bag. If

equipped with a Gore-Tex microfilter, the same rules for periodic inspection and disposal apply. The Gore-Tex microfilter has a clamp that holds it in place. The Gore-Tex filter must be changed when any abrasions, damage or heavy discoloration is noticed on the surface of the filter (refer to photo 1).

Photo 8

3. **HEPA or ULPA Exhaust Filter:** This cartridge is mounted on the top of the motor, outside the container. If the main filter and microfilter are properly maintained, the glass fiber element in the exhaust filter should perform satisfactorily for a minimum of one year. It cannot be renewed or restored. Exact life will depend upon frequency of use and amount and type of material collected. Normally four changes of microfilter equal one change of HEPA/ULPA filters. Remove the protective metal casing and replace the pleated glass fiber cartridge according to the accompanying instructions (photo 8). Cartridges must be replaced more frequently if the cleaner has had unusually heavy use, or if the various pre-filters have been neglected.

CAUTION: Use only genuine Nilfisk replacement filter components. The use of substitute components could pose a grave risk of personal exposure, and will cause all equipment warranties to be void.

Industrial Vacuums, Inc. www.industrialvacs.com 800-214-9111
TROUBLESHOOTING

Loss of Power:

1. Make sure the power cord is properly fastened to the motor head, and it is properly plugged into the socket.
2. Be sure the electrical circuit has not blown a fuse.
3. If the circuit is functioning properly, but there is still no power, contact our Customer Service Department at (800) 645-3475, extension 2.

Loss of Suction:

If the GM 80 loses suction power during operation, there may be several reasons, the most likely of which is a full container. Suction loss is gradual as the container fills with debris. Check to see if there is any blockage or restriction in the hose.

- 1) Check the condition of the main filter and microfilter (refer to photos) and determine whether there is an excessive loading of debris. If there is overloading in the main filter, you can shake it out. If the microfilter is loaded, or there is any other problem with the microfilter, it needs to be replaced. Call our Customer Service Department at (800) 645-3475, extension 2 to order replacement filters.
- 2) If all fails, call our Customer Service Department at (800) 645-3475, extension 2.
